

Guarding The Safety Of Over 70,000 Fans, Makes Patterson The MVP

Kevin Waters (left) and Greg Trombold of Trombold Equipment Company.

During construction of a Midwestern professional football stadium, contractors needed a reliable fire suppression system with pressurization capacity of 2,000 gpm at 95 psi to protect die-hard fans even on the coldest Sunday afternoons. Greg Trombold, Trombold Equipment Company (Patterson Representative), recommended Patterson's Model 8x6 YS horizontal split case fire pump as the MVP on this project. "Patterson's quality and very competitive price were paramount in our consideration," Trombold reports. "And its very timely delivery reinforced our good decision." Now eight years later, the Patterson pumping system is still first string. "It's been extremely reliable," says Kevin Waters, mechanical technician. In addition to standard monthly inspections, weekly test cycles monitor amps, volts, packing, relief valve and bearings. "It's been really simple to take care of," says Waters, "we've had no problems. It's been a good system for us." Always being at the top of your game...that's MVP performance. And that's Patterson Fire Pumps.

LARGE STADIUM VENUES

The rugged dependability of Patterson Fire Pumps has made them the preferred protection of life and property in thousands of large installations around the world, including sports stadiums. Patterson is the industry leader in prompt delivery of standard model fire pumps worldwide.
